

# Custom Leather Door Pull for MX5 NA Installation Manual

---

## Tools required:

- Crosshead screwdriver (+)
- Flat screwdriver or sharp knife

## Removing the old door pull

You need to remove the old plastic door pull by unscrewing two screws using the cross head screw driver. The upper one is hidden with plastic cap, you will need the knife or flat screwdriver to remove it.

## Installation and positioning of the leather door pull

Reuse the golden bolt at the top and the black at the bottom.

1. Attach the white plastic shims for the caps to the screws. They have to face with the sharper edge to the screw heads.
2. The leather strap attaches next with the cut in part facing the door opening pull (Top of Roadster writing facing door opener).
3. Attach the black offset shim (the wider one) to the top golden screw and the other shim to the bottom black one as shown below.

Make sure when screwing in the bottom one, the bottom black shim does not interfere with the hole of the side trim pocket.

Before fully tightening the screw, strap in position it, so there is 1mm distance to the door opener.

Now you can vary and set the desired tightness of the strap and tighten the screws.

The plastic screw head caps attach through clicking to the white shims under the screw heads.

The door pull should sit now tight and precise.

**Congratulations on your new leather door pull and extended leg room!**
